1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Whatever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in this report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

Subgroup Code No.	Schedule A Commodity Code No.	Description

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Whenever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in the report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

Subgroup Code No.	Schedule A Commodity Code No.	Description

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in this report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in the report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

Subgroup Code No.	Schedule A Commodity Code No.	Description

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ This shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in this report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

Subgroup Code No.	Schedule A Commodity Code No.	Description

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in the report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight total of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight total of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight total of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight total of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in this report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

IMPORT GROUP AND SUBGROUP CODE DESIGNATIONS - 1944

Group Code - The first digit in the Schedule A number of each commodity (or the first two digits, in the case of Group 00) indicates the group to which it belongs. Group value and shipping weight totals are shown in this report at the end of each group.

Subgroup Code - Subgroup code designations are shown at the end of each subgroup in the same column with the unit of quantity. Subgroup value and shipping weight totals appear on the line with the subgroup code designations.

Reference to the corresponding code designations in the following list will identify the groups and subgroups, which are indicated in the report in code only.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore. there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.

1/ The shipping weight may include that of minor components of the ore when this ore is composed of two or more components. In such event, these minor components are reported under their respective commodity numbers without a shipping weight. Wherever the shipping weight for the ore from a given country is less than the gross weight of the ore, there may have been transactions fully reflected in the gross weight totals but for which the shipping weight has been assigned only to the chief component of the transactions.
